About Watson Pharmaceuticals

Watson Pharmaceuticals, Inc. (NYSE-WPI) is a global specialty pharmaceutical company with approximately \$3.6 billion in revenues in 2010, a broad product line and operations in well-established and emerging markets.

Watson is focused on enhancing its commercial position in global generics, brands and biologic pharmaceutical products, targeting products that will deliver long-term growth while maintaining a competitive cost structure.

About Eden Biodesign

Eden Biodesign is an integrated biopharmaceutical development organisation and part of The Watson Group (www.watson.com).

With well over a decade of experience in producing a wide range of complex biopharmaceuticals, Eden Biodesign provides Watson with a strong foundation for establishing a leadership position in global biologics.

We understand exactly how process development and cGMP manufacturing fit into the broader picture of clinical development and have an intimate knowledge of global regulations and what it takes to bring products to international markets. We have demonstrated our knowledge and expertise by successfully taking biopharmaceutical products from early concept studies to approval and market launch in numerous markets.

Our role is to design, develop and deliver valuable biopharmaceutical medicines through the application of good science from day one. Our approach is to “begin with the end in mind” – using the experience gained over many years of working with leading global biotechnology and pharmaceutical companies to ensure that by being clear what we’re trying to achieve at the outset we deliver high quality and cost-effective new medicines in a timely manner.

Biologics Development

As Watson Pharmaceuticals' Biologics Centre of Excellence, Eden Biodesign is focused primarily on the development of a growing portfolio of biologics products for Watson and its partners. These include biosimilars, "biobetter" products and also innovative biopharmaceuticals in the oncology, urology and women's health fields.

The development of such a diverse range of complex products requires a level of expertise that can only be built on long experience and a successful history. Eden Biodesign has an enviable track record based on dozens of successful development projects undertaken for third party partners ranging from start-up biotechnology companies to multinational pharmaceutical companies.

begin with the end in mind.

Partner of Choice

The combination of Eden Biodesign's substantial intellectual capital, world-class development and manufacturing technologies, state-of-the-art facilities and significant market expertise, coupled with Watson Pharmaceuticals' leading expertise in commercialisation of both generic and branded pharmaceuticals makes us your partner of choice for the development of biologics.

We place great importance on our alliances and partnerships. Our approach is flexible and we are open to a wide range of potential deal structures that deliver sensible risk and reward for both parties.

Our state-of-the-art licensed facility...

...is custom designed for multi-product operation and delivers a comprehensive range of capabilities necessary to take a wide range of biopharmaceuticals from proof-of-concept through to cGMP manufacture for clinical trials, market launch and commercial supply.

- 4100m² (43,000 sq ft) facility
- Dedicated and segregated pilot production process development suites
- Segregated cGMP suites designed for rapid, flexible and robust manufacturing
- Fully equipped QC and analytical testing laboratories
- Fully compliant with EU, USA and other international cGMP guidelines
- MHRA (EMEA) inspected
